SECTION 01

Creating Your Account

Head to the PaperDesk landing page and choose Sign Up Free — from there it takes under a minute to get trading.

- 1** Enter your full name, email address, and phone number.
- 2** Choose a password (minimum 8 characters) and confirm it.
- 3** We'll email you a one-time code (OTP) to verify your address — enter it on the next screen. The code expires after a few minutes, but you can request a new one if it does.
- 4** Once verified, your account is created instantly with ₹10,00,000 in virtual capital already sitting in your balance — no KYC, no bank linking, nothing else to set up.

i Signing up with Google

You can also sign up (or log in) with your Google account in one click — this skips the OTP step entirely, since Google has already verified your email.

By signing up you agree to PaperDesk's Terms of Service and Privacy Policy, linked at the bottom of every page.

SECTION 02

Logging In

Once you have an account, logging back in is straightforward:

- 1** Go to the Login page and enter your email and password, or tap Continue with Google.
- 2** Forgot your password? Tap Forgot password? — we'll email you a reset link that's valid for a limited time.
- 3** Once logged in, you'll land on the Watchlist — your main screen.

i Staying signed in

PaperDesk automatically signs you out after a period of inactivity, for security. If you're timed out, just log back in — nothing you've done is lost, since all your trades and holdings live on the server, not your browser.

SECTION 03

The Watchlist — Your Home Screen

The Watchlist is where you'll spend most of your time — it's your live view of the market and the starting point for every trade.

The indices strip

At the top of the page you'll see a live strip showing NIFTY 50, BANK NIFTY, and SENSEX, along with a market status indicator (open/closed) so you always know if you're looking at a live or last-closed price.

Adding symbols

- 1 Tap the search icon or field and start typing a company name or symbol (e.g. "RELIANCE" or "TCS").
- 2 Select a result from the dropdown to add it to your watchlist instantly.
- 3 Swipe or tap the row's remove option to take a symbol back off your list.

Reading a row

Each row shows the symbol, exchange (NSE/BSE), live LTP (Last Traded Price), and the day's % change — colored green for gains, red for losses. Prices refresh automatically; you don't need to reload the page.

Tap a row to open its Chart, or use the row's dedicated buttons to jump straight to Trade or Set Alert.

i Sorting your watchlist

Use the sort control to reorder your list by name, LTP, or % change — handy for spotting your day's biggest movers at a glance.

SECTION 04

Reading a Chart

Tap any symbol's chart icon to open a full candlestick chart with volume and RSI, similar to a professional trading terminal.

Timeframes

Switch between 1m, 5m, 15m, 1H, and 1D candles using the buttons along the top of the chart. The chart re-fetches data for whichever timeframe you select.

Price panel

- Green candles = the price closed higher than it opened; red = closed lower.
- The horizontal dotted line marks the current live price.
- Volume bars sit along the bottom of the price panel — taller bars mean heavier trading that period.

RSI panel

Below the price chart is a separate RSI (14) panel — the Relative Strength Index, a momentum indicator that ranges from 0 to 100. Readings above 70 are traditionally considered overbought, and below 30 oversold — both reference lines are drawn on the panel for you. Scrolling or zooming either panel keeps both in sync.

i This is a simulator, not investment advice

RSI and every other indicator on PaperDesk is shown for educational purposes only. No indicator guarantees future price movement — always treat this as practice, not a signal to act on with real money.

SECTION 05

Placing a Trade

Tap Trade on any watchlist row or chart to open the order ticket.

- 1** Choose BUY or SELL.
- 2** Choose an order type — Market (fills instantly at the current live price) or Limit (fills only once the market reaches a price you set).
- 3** Enter the quantity. If you're selling, the ticket shows exactly how many shares of that symbol you currently hold and can sell.

- 4** Check the Estimated value and Cash available figures at the bottom, then tap the place-order button to confirm.

Order Type	What It Does
Market	Executes immediately at the current live price — the default, fastest option.
Limit	Only fills once the market price reaches (or improves on) the price you specify. Sits as a pending order until then.

i Same-day square-off

Bought something and want to sell it back the same day? No problem — the order ticket always shows your true total holdings, including anything you bought minutes ago, so you can square off intraday just like a real trading terminal.

SECTION 06

Setting Price Alerts

PaperDesk can notify you the moment a symbol crosses a price level you care about — delivered straight to Telegram.

- 1 Tap Set Alert on any watchlist row.
- 2 The first time you do this, you'll be asked to link your Telegram account — tap the link button, open the generated link, and hit Start in Telegram. It takes about ten seconds and only needs to be done once.
- 3 Choose whether to alert when price goes ABOVE or BELOW your trigger price, enter that price, and tap Set Alert.
- 4 Your active alerts for that symbol are listed right below the form, each with a cancel option.

i No limit on alerts

Set as many alerts across as many symbols as you like — there's no cap and no extra cost.

SECTION 07

Positions — Today's Open Trades

The Positions tab shows exactly what it sounds like: anything you've bought today that you still hold. Think of it as your intraday trading desk.

- Each row shows Qty, Avg. Price, LTP, and the day's P&L for that position.
- Tap a position to add more or square it off (sell) directly.
- You can export a same-day PDF report of everything traded today from this page.

If a position from today is still open at the end of the day, it doesn't disappear — it simply moves over to your Portfolio automatically the next time you check it, becoming a regular holding rather than an intraday position.

SECTION 08

Portfolio — Your Carried-Forward Holdings

The Portfolio tab is your longer-term view — everything you bought on a previous day and are still holding.

- A summary strip up top shows Invested, Current Value, Unrealized P&L, Realized P&L, Overall P&L, and your Cash Available.
- The holdings table lists each stock's quantity, average buy price, live price, and running P&L.
- Tap any holding to add more or exit the position, or to see the full detail sheet on mobile.
- Export a full PDF trade-history & P&L report any time via Export PDF.

i Positions vs. Portfolio, in one line

Bought today and still holding it → it's in Positions. Held it overnight → it's moved to Portfolio. Nothing you do has to change — the app sorts this out for you automatically.

SECTION 09

Orders — Today's Order Book

The Orders tab is a same-day order book — every order you've placed today, whatever its outcome.

- Executed, cancelled, and still-pending orders all show up here while the day is in progress.
- Each row shows Side, Qty, Price, and Status; tap a row (on mobile) for the full detail, including the exact time it was placed.
- A pending Limit order can be cancelled right from this screen if it hasn't filled yet.

i This list resets every day

Orders is a same-day view, not a history — once the calendar day rolls over, it clears out. Your full order history always lives on in Reports → TradeBook, which never resets.

SECTION 10

Reports — P&L, TradeBook & Analytics

The Reports page has three tabs, each answering a different question about your trading.

Tab	What it shows
P&L Summary	Your Invested, Current Value, Realized/Unrealized/Overall P&L for a date range you choose, plus a Realized P&L breakdown by symbol.
TradeBook	Every executed trade you've ever placed, filterable by date range (Today / 7D / 30D / All Time / Custom) and by Buy/Sell — exportable to PDF or CSV.
Portfolio Analyser	A donut chart of your current allocation by holding, a P&L-by-holding bar view, and a detailed Portfolio Allocation table with weight per stock.

On mobile, tables trim down to the essentials (Qty, Avg. Price, LTP, P&L) with the rest of the detail available in a tap-to-open sheet — so nothing important is ever hidden, just tucked one tap away.

SECTION 11

Your Profile & Theme

Tap your avatar in the top-right corner to open your Profile, where you can:

- Update your full name, date of birth, and gender.
- View your account email (this can't be changed here — contact support if you need to) and the date you joined.

Anywhere in the app, tap the sun/moon toggle in the top navigation to switch between light and dark themes — your choice is remembered automatically the next time you visit.

SECTION 12

How the Trading Day Works, Start to Finish

Putting it all together — here's the full lifecycle of a single trade on PaperDesk:

- 1** You place a BUY order from the Watchlist or a chart. If it's a Market order, it fills instantly; a Limit order waits until your price is hit.
- 2** The moment it fills, it appears in Orders (today's order book) and as an open trade in Positions.
- 3** You can add to it or square it off (sell) any time the same day, straight from Positions.
- 4** If you sell it before the day ends, the trade is complete — its realized P&L shows up in Reports.
- 5** If you don't sell it, it carries forward: the next day, it quietly moves from Positions into Portfolio, and the Orders list from the previous day clears out.
- 6** From here it behaves like a normal holding — trackable, sellable any time, and included in every Portfolio and Reports view until you exit it.

SECTION 13

Frequently Asked Questions

Is this real money?

No. Every rupee on PaperDesk is virtual. No real money is ever deposited, traded, or withdrawn, and PaperDesk is not a stockbroker.

Where do the prices come from?

Live (or near-live) NSE/BSE market data from third-party providers. Occasional delays are possible, so PaperDesk should never be used as your source of real-time data for actual trading.

Can I short-sell?

No — PaperDesk currently supports long-only trading. You can only sell what you actually hold.

What happens if I don't sell something I bought?

Nothing bad — it simply carries forward into your Portfolio the next day, exactly like a real brokerage account, and stays there until you choose to sell it.

I bought a stock, why does it show ₹0 gain the same second?

You bought at the live price, so there's no gap yet — P&L moves as soon as the live price ticks away from your entry.

Can I use PaperDesk to decide real trades?

PaperDesk is for practice and education only. Nothing on the platform is investment advice — always consult a qualified, SEBI-registered advisor for real financial decisions.

SECTION 14**Getting Help**

Stuck on something, or found a bug? We want to hear about it.

- Email us any time at paperdesk.support@gmail.com — account issues, bugs, or feedback all welcome.
- For legal/policy questions specifically, see our [Terms of Service](#), [Privacy Policy](#), and [Disclaimer](#), linked in the footer of every page.

i Thanks for practicing with PaperDesk

Whatever brought you here — curiosity, a first step into the markets, or sharpening a strategy before going live — we hope this makes it a little less intimidating. Good luck out there, and remember: it's all virtual until you decide otherwise. Trade safe, learn first.
